

TCFS Type

TCFS Types

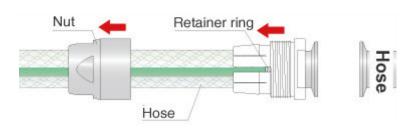

Material : Stainless steel Nut: SUS304, Sleeve : PTFE Nipple unit: US316L PVDF screw: PVDF Retainer ring: SUS 304

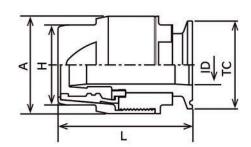

(C) -30°C to 140°C

Connector Feature

- · Attaches securely to the hose with a special sleeve construction, eliminating fluid leaks and hose disconnections.
- Fasten the cap nut fully to complete the operation. Work can be performed reliably and consistently regardless of who does the job.
- Fastened with a cap nut, the TCFS coupling is economical because it can be used again and again, unlike caulked fittings.
- The shape of the nipple prevents liquid pooling, making it sanitary and perfect for conveying foods and beverages. Made from stainless steel (SUS 316L and 304) and Fluorine plastic, the TCFS is rust-resistant and sanitary.
- The TCFS can be disassembled for easy material sorting when disposing. (Compliant with stainless steel recycle systems.)
- The shape of the nipple prevents liquid pooling, so disassembly is not required for washing, which saves time.
- The cap nut coupling makes attachment easy, allowing the hose to be simply cut to length where it will be used, unlike caulked fittings.
